For two-letter codes and other abbreviations, refer to the "Guid-
ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.(54) Title: IMPLANT FOR CORRECTION OF PECTUS EXCAVATUM(57) **Abstract:** An implant for correcting pectus excavatum is disclosed, which comprises a chest correction bar (30) inserted into a body for lifting a depressed sternum and costal cartilages, and a stabilizer (40) for being inserted into a distal end of the chest correction bar (30) to prevent the chest correction bar from being rotated inside the body, wherein the chest correction bar (30) is formed at both jagged distal ends thereof with recesses (33) each of a predetermined length along the lengthwise direction of the chest correction bar (30), and wherein the stabilizer (40) comprises: two fixing plates (41, 41') for being fixed to the body of a patient; a bridge (42) connecting the two fixing plates (41, 41'); two protruders (43, 43') each generally opposed from the fixing plates (41, 41') so as to be hitched by the recesses (33) at the distal ends of the chest correction bar (30) inserted from under the bridge (42), where there are formed two spaces (C) each of a predetermined size between the two protruders (43, 43') and two lateral lengthwise surfaces of the bridge (42) so that the distal ends of the chest correction bar (30) can be inserted therein, thereby allowing the stabilizer (40) to be easily inserted into the chest correction bar (30), and once the insertion is made, pain and infection caused by stimulation on incised portions of a patient can be prevented.
